

5 **IMMUNOTHERAPEUTIC COMPOSITIONS AND METHODS FOR THE
TREATMENT OF MODERATELY TO WELL-DIFFERENTIATED CANCERS**

Abstract of the Disclosure

10 Provided are immunotherapeutic compositions and methods for the treatment of
cancers characterized by the presence of moderately to well-differentiated cancer cells.
Exemplary immunotherapeutic compositions employ antigen presenting cells, including
dendritic cells, activated by a protein conjugate such as fusion proteins including a prostatic
acid phosphatase/granulocyte-macrophage colony stimulation factor fusion protein. Also
disclosed are methods for assessing the susceptibility of cancer cells to treatment regimens
15 employing one or more immunotherapeutic composition.
